Student Support Implementation Group

Project closed on 31 July 2015

Implementation work on the Project on Enhancing Student Support will be coordinated by the Student Support Implementation Group (SSIG).

Remit

The work of the Student Support Implementation Group is aimed at supporting the University’s Strategic Plan’s Strategic Goal of “excellence in learning and teaching” and Strategic Theme of “Enhancing our student experience”.

The Student Support Implementation Group (SSIG) will coordinate the implementation work in support of the framework of proposals for an enhanced approach to guidance and support for students, which was agreed by the Principal’s Strategy Group on 28 November and 5 December 2011. Given the far-reaching nature of the proposals, the SSIG will develop a communication strategy to inform students and staff about the changes.

The work will encompass a number of work areas. SSIG will develop principles for the work of Personal Tutors; their remits; and minimum requirements for contact etc. SSIG will oversee the coordination of other implementation groups:

1. the work in each College to support College activities. Colleges will lead on their own areas and will keep SSIG informed on relevant matters, e.g. progress on appointments and development of student support processes.
2. the work to strengthen student support services, which will be taken forward by a review group supported within the Student and Academic Services Group.
3. the work on developing IT tools and resources, in particular the student record, to support personal tutoring.
4. the Institute for Academic Development’s work on establishing and delivering a briefing and training programme for Personal Tutors.

Governance
